

## Stick Figure Lite

This is a Lite version of **StickFigure**. It helps you create 2D curved lines.

There is a component called **LinearLimb**, It takes 3 **GameObjects** as **Handles**, and draws a curved line along these handles. You can use LinearLimb as **arm**, **leg** and **spine**.

To add LinearLimb component go to **Tools > ScriptBoy > StickFigure Lite > LinearLimb Lite**.

It doesn't have any special settings. There are 3 white handles that you can drag.
